

ENERGY POLICY

Farrans Construction are committed to achieving ongoing improved energy performance and reducing our Carbon Dioxide emissions. We endeavour to achieve this through the development and implementation of an energy management system in accordance with the requirements ISO 50001. This policy covers all energy used at all locations, including fuel for mobile plant and off-site road haulage.

As a company, we are committed to:-

- a) Continual improvement in energy efficiency in line with Best Practice
- b) Ensuring the availability of information and of all necessary resources to achieve our energy objectives and targets
- c) Complying with all applicable requirements related to our energy aspects, whether legally required or agreed by our energy management group
- d) Actively managing our procurement and consumption of energy
- e) Reducing the environmental impact arising from our consumption of energy
- f) Investing in appropriate, clean, energy technology

To achieve continual improvement we will:-

- Annually set and review energy objectives and targets in our energy improvement plan
- Implement an appropriate system for the measurement of energy performance
- Regularly report on energy performance
- Designate energy champions as having responsibility for energy efficiency
- Provide appropriate information and training on energy efficiency to all employees
- Actively seek new opportunities of improving energy efficiency as part of the overall continuous improvement of our business
- Encourage suppliers and sub-contractors to adopt standards comparable to our own
- Include energy whole life cycle performance when purchasing plant and equipment

It is recognised that emissions to the environment have contributed to the problems of global warming, acid rain, and general health problems due to ozone depletion and air pollution. We all must play our part in promoting energy efficiency and reducing our Carbon Dioxide emissions. This policy is communicated to our employees and available to the public on request.

J. Wilson
